This 2013 Statistics of Income (SOI) line item estimates publication provides estimates of frequencies and amounts of the entries on the lines of the forms and schedules filed with individual tax returns as shown on the 2013 Individual SOI Complete report weighted file. The estimates presented here are based on returns filed in Processing Year 2014 that were sampled statistically and then weighted to estimate the entire 2013 Tax Year.

Variations of the three basic forms: 1040, 1040A, and 1040EZ, include electronically filed returns. The form variations were categorized into the basic forms according to the data reported on the return. For example, if a return was filed electronically and its characteristics indicated that it would otherwise have been filed on paper as a 1040 or 1040A, then it was classified as such statistically.

2013 Complete Report estimates:

147,351,299	Total, all individual returns filed
84,654,613	1040 returns
39,406,366	1040A returns
23,290,320	1040EZ returns

Estimates of returns filed electronically:

125,317,979	Total, all individual returns filed
69,350,524	1040 returns
35,890,253	1040A returns
20,077,203	1040EZ returns

Limitations and Guidelines for 2013 Line Item Estimates

Since SOI obtained the line counts used in this package from the Tax Year 2013 Individual SOI Complete Report File, they are subject to the same data limitations as the data included in the Complete Report File. These limitations are derived from the fact that these data are statistically sampled, meaning that the line counts are estimates based on samples, and should not be mistaken for actual counts of the entire filing population. While most forms and items are present often enough to provide accurate estimates, some less popular items should be used with a high degree of caution. SOI removed all line items with a sample count of fewer than 10.

The sample used in this study is one of a large number of samples that could have been selected using the same sample design. The estimates calculated from these different samples would vary. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that the interval includes the population value. Shown below are 95-percent confidence intervals for selected Form 1040 items. (For example, the population value of number of returns for salaries and wages, with 95-percent confidence, is between 121,925,660 and 122,452,540). These confidence intervals correspond to the estimates for all individual income tax returns filed for Tax Year 2013.

Description of the Sample for the Line Item Estimates

This section describes the sample design and selection, the method of estimation, the sampling variability of the estimates, and the methodology of computing confidence intervals.

Domain of Study

The statistics in this report are estimates from a probability sample of unaudited Individual Income Tax Returns, Forms 1040, 1040A, and 1040EZ (including electronic returns) filed by U.S. citizens and residents during Calendar Year 2014.

All returns processed during 2014 were subjected to sampling except tentative and amended returns. Tentative returns were not subjected to sampling because the revised returns may have been sampled later, while amended returns were excluded because the original returns had already been subjected to sampling. A small percentage of returns were not identified as tentative or amended until after sampling. These returns, along with those that contained no income information or frivolous or fraudulent income information when recognized, were excluded from the estimates.

The estimates in this report are intended to represent all returns filed for Tax Year 2013. While most of the returns processed during Calendar Year 2014 were for Tax Year 2013, the remaining returns were mostly for prior years, and a few for noncalendar years ending during 2012 and 2013.

Sample Design and Selection

The sample design is a stratified probability sample in which the population of tax returns is classified into subpopulations, called strata, and a sample is randomly selected independently from each stratum. Strata are defined by:

1. Nontaxable (including no alternative minimum tax) with adjusted gross income or expanded income of \$200,000 or more.
2. High business receipts of \$50,000,000 or more.
3. Presence or absence of special forms or schedules (Form 2555; Form 1116; Form 1040, Schedule C; and Form 1040, Schedule F).

4. Indexed positive or negative income. Sixty variables are used to derive positive and negative incomes. These positive and negative income classes are deflated using the Chain-Type Price Index for the Gross Domestic Product to represent a base year of 1991. (See footnote 1 for details.)
5. Potential usefulness of the return for tax policy modeling. Thirty-two variables are used to determine how useful the return is for tax modeling purposes.

Tax data processed to the IRS Individual Master File at the Enterprise Computing Center at Martinsburg during Calendar Year 2014 were used to assign each taxpayer's record to the appropriate stratum, and to determine whether the record should be included in the sample. Records are selected for the sample either if they possess certain combinations of the four ending digits of the social security number, or if their ending five digits of an eleven-digit number generated by a mathematical transformation of the SSN is less than or equal to the stratum sampling rate times 100,000.

Data Capture and Cleaning

Data capture for the SOI sample begins with the designation of a sample of administrative records. While the sample was being selected, the process was continually monitored for sample selection and data collection errors. In addition, SOI selected a small subsample of returns to independently review, analyze, and process for a quality evaluation.

The administrative data and controlling information for each record designated for this sample was loaded onto an online database at the Cincinnati Submission Processing Center. Computer data for the selected administrative records were then used to identify inconsistencies, questionable values, and missing values, as well as any additional variables that an editor needed to extract for each record.

After the processing center completed its review, SOI further validated, tested, and balanced the data. Adjustments and imputations for selected fields based on prior-year data and other available information were used to make each record internally consistent. Finally, prior to publication, SOI reviewed all statistics

and tables for accuracy and reasonableness in light of provisions of the tax law, taxpayer reporting variations and limitations, economic conditions, and comparability with other statistical series.

Some returns designated for the sample were not available for SOI processing because other areas of IRS needed the return at the same time. For Tax Year 2013, some 0.01 percent of the sample returns were unavailable.

Method of Estimation

SOI obtained the weights by dividing the population count of returns in a stratum by the number of sample returns for that stratum, then adjusted the weights to correct for misclassified returns. These weights were applied to the sample data to produce all of the estimates in this report.

Line Item Estimates, by Individual Income Tax Form and Schedule for Tax Year 2013

The total estimated line counts for each individual tax form and schedule follow. The number of returns for the lines appears on the pages on the left, while the corresponding amount (in thousands of dollars) for the lines appear on the colored pages on the right.

Future Developments

For the latest information about developments related to Form 5884 and its instructions, such as legislation enacted after they were published, go to www.irs.gov/form5884.

What's New

- The work opportunity credit is scheduled to expire for employees who begin work after 2013. Do not report wages paid or incurred to these employees on Form 5884 unless the credit is extended. See *Future Developments*, earlier.
- Empowerment zone designations are scheduled to expire at the end of 2013. Wages paid or incurred for services performed after 2013 by a designated community resident or summer youth employee who lives in an empowerment zone may no longer qualify for the work opportunity credit unless the designation is extended. See *Qualified Wages* for details.

Purpose of Form

Use Form 5884 to claim the work opportunity credit for qualified first- and/or second-year wages you paid to or incurred for targeted group employees during the tax year. Your business does not have to be located in an empowerment zone or rural renewal county to qualify for this credit.

You can claim or elect not to claim the work opportunity credit any time within 3 years from the due date of your return on either your original return or an amended return.

Taxpayers, other than partnerships, S corporations, cooperatives, estates, or trusts, whose only source of this credit is from those pass-through entities, are not required to complete or file this form. Instead, they can report this credit directly on Form 3800.

How To Claim the Credit

You must request and be issued a certification for each employee from the state employment security agency (SESA). The certification proves that the employee is a member of a targeted group. You must receive the certification by the day the individual begins work or complete Form 8850, Pre-Screening Notice and Certification Request for the Work Opportunity Credit, on or before the day you offer the individual a job.
